## Texon® T97 / T97N / T249 / T250 / T251

Economical range of Non-woven insole with good performance

### Features:

Texon T97/T97N/T249/T250/T251 is a non-woven insole material designed for use in cement lasted footwear and Veldtschoen/Stitchdown constructions. It can be used with or without a sock lining. It is also used in welted footwear with inclined or upright ribs, giving excellent bonds.

### Applications:

Random fibre construction provides superb internal bond, does not delaminate.

High sole bond adhesion with neoprene and PU adhesives allow use with all outsole materials.

Can be split accurately so can be used for Plastak backparts and will accept injected plastic readily.

Excellent stitch holding is ideal for Veldtschoen constructions.

Clean cut edges after trimming for constructions where the edge of the insole is visible.

Excellent moisture absorption and dispersal qualities enhance foot comfort under all conditions.

Water repellent edges are ideal for Veldtschoen where edges are visible.

Dimensionally stable, so will not shrink or grow due to moisture absorption.

High flex endurance means less breakdown in wear and fewer returns.

High abrasion resistance so can be used without a sock lining.

Full range of colours available for matching to other components.

### Technical Specifications:

Standard colours of T97/T97N include Beige, Chrome, Light Brown and Charcoal. Special colours can be matched on request. T249 is pink, T250 is Beige while T251 is grey.

Gauge for T97: 1.25mm - 3.00mm

T97N: 2.00mm

T249/T250/T251: 0.90mm - 2.50mm

Sheet size of T97/T97N is 100cm x 150cm.

Sheet size of T249/T250/T251 is 91cm x 152cm.

T97N has low water absorption, which is ideal for outdoor sport shoes.

A natural latex coating, LRC, is available to improve adhesion to latex adhesives.
