

Texon® T89 / T90 / T91
Non-woven Insole Materials

Texon® T89 / T90 / T91

Non-woven Insoling for Veldts/Stitchdowns, Flexible Footwear and Cement Lasted Constructions

Texon T89

Texon T89 is a soft and flexible non-woven insole material, developed for footwear where more traditional materials are too firm. Can be used in cement lasted footwear and Veldtschoen construction.

Texon T90

Texon T90 is a non-woven insole material designed for use in cement lasted footwear and Veldtschoen/ Stitchdown constructions. It can be used with or without a sock lining. It is also used in welted footwear with inclined or upright ribs, giving excellent bonds.

Texon T91

Texon T91 is a high-density, non-woven insole material giving a higher physical performance than Texon T90, specifically for use in demanding Veldtschoen constructions, footwear with deep cavity sole units, and other types of footwear requiring high standards of wear performance.

Applications:

Random fibre construction provides superb internal bond, does not delaminate.

High sole bond adhesion with neoprene and hot melt adhesives allow use with all outsole materials.

Can be split accurately so can be used for Plastak backparts and will accept injected plastic readily.

Excellent stitch holding is ideal for Veldtschoen constructions.

Clean cut edges after trimming for constructions where the edge of the insole is visible.

Excellent moisture absorption and dispersal qualities enhance foot comfort under all conditions.

Water repellent edges are ideal for Veldtschoen where edges are visible.

Dimensionally stable, so will not shrink or grow due to moisture absorption.

High flex endurance means less breakdown in wear and fewer returns.

High abrasion resistance so can be used without a sock lining.

Full range of colours available for matching to other components.

Also available with a surface treatment for improved adhesion to latex adhesive.

Technical Specifications:

A colour range is available.

Standard colours include Beige, Chrome, Light Brown, Dark Brown and Charcoal. Special colours can be matched - please enquire.

Texon trade mark print in brown ink on T90 and T91. Can be supplied unprinted; please specify when ordering. Standard gauge for Texon T89/ T90/ T91 starts from 1.50mm to 3.00mm.

Sheet size 100cm x 150cm. A range of gauges is available. All products supplied on pallets.

A natural latex coating, LRC, is available to improve adhesion to latex adhesives.
